

# Clinical Trial Expertise

As a scientific leader in hearing research, NAL offers independent clinical trial management and execution to help the hearing healthcare industry secure relevant clinical data for commercialisation. Our clinical trials produce robust, globally compliant clinical data from well-designed research for international product registration, marketing claims, market access and post-market clinical follow-up.

NAL's clinical trial process takes full advantage of the highly skilled multidisciplinary researchers at NAL. Our experienced and qualified clinical trials team (+15 years), scientific experts, professional audiologists and project management office are experts at measuring hearing device outcomes using a range of standardised and innovative tools, both in the lab and in the real world.

## Clinical Trial Design and Execution

NAL provides medical device and diagnostic products trial expertise for the hearing industry in the following areas:

- Pilot and feasibility studies
- pivotal studies designed to collect safety and efficacy data
- post-market studies

Our advanced assessment tools and emerging technologies, such as access to real-time continuous clinical data, enable the design of leading-edge clinical trials delivering credible data that shape hearing healthcare today and informs practice tomorrow.

### Services Summary

- **Study design**
